

As a project manager agent- design and build- a production grade real time/world running/functional installable pack

NOTHING PAID SHOULD BE INCULDED WITHOUT ASKING

There shall be only one main folder for the project (PS C:\AI_Workspace - all related to this project should be inside

NEVER FORGET/CHANGE PREVIOUS BUILT DESIGN UNLESS NEW DESIGN APPROVED.

THIS PROJECT IS TO BE BUILD VIA CMD COMMANDS ONLY (NO MANUAL COMMANDS) TO AVOID ERRORS

DO NOT DELETE/CHANGE COMPLETE DESIGN/ARCHITECTURE/FEATURE/OPTION UNLESS NEEDED, FOR

all provided repo/tools methodology/logic/code shall be extracted and then applied in this app/platform by merging all
group same types of tools/repos and let the user select (if cannot me merged) opt for on/off of that via toggle button.

rely on a multi-stage execution pipeline rather than plain text completion.

To make your AI workspace execute tasks and return real media outputs (like images or interactive code), your back

[User Input] ??? [LLM with Function Calling] ??? [Tool Execution Handler]

?

[Rich Media Output] ??? [Frontend Renderer] ??? [API Response / Media Payload]

Always remember everything related project (written/rectified/modified/updated/added...everything) shall be done via
you can redesign anything if needed keeping security tact that nothing goes out .

always remember everything and act as the project manager agent and complete the project sequentially one by one

Generate interactive UI/frontend with all features needed (USE all REPOS REQUIRED PROVIDED BELOW TO FULL

interaction/response chat panel just like other available ai's with same kind of backend mechanism (where like claude

THERE SHOULD BE AN FEATURE/OPTION TO PASTE/UPLOAD ANY REPO/TOOL/FEATURE/URL AND NAME

search web/github to add libraries to incorporate symbols and icons and letters and languages or anything.

THERE SHOULD BE A FEATURE/OPTION TO FEED/UPLOAD INFORMATION SOURCE (URL,PFD,TXT,VIDEO,

a feature/option- to convert any format type of : document/image/video/audio/file/folder - into any other user desired

a feature/option- to compress/resize any format type of : document/image/video/audio/file/folder in any of the desired

a feature/option - editing tool- for document/image/video/audio editor with all editing tools capabilities

all the repos/tools/features/options shall have there access linked to the access-buttons mentioned on the UI/fronter

UI should be easy to use, not complicated to understand.

well-grouped without missing anything

clean and useful and properly designed.

all the options/features that can have on/off state shall have on/off toggle option.

the options/features where there is input/output methodology shall have options to upload/add/refresh/save/download

there should be "i" or help

As for look make display live and active.

there should be proper input and output display panel. Also all repos/tools incorporated should have on/off toggle op
enable keyboard input effect on the UI button like enter=click and other shortcuts.

always check all UI wiring/sync/buttons/scrollbar are fulfilled according to the needs and are functional. UI componen

THERE SHALL BE A TOOL TO INBUILT TO AUTO DETECT REAL TIME BUGS AND ELEMIMATE THEM.

ALL OPENSOURCE REPOS MUST BE INCLUDED (there are more llm models other then ollama that are also ne
make all repos active side by side.

THIS SHALL BE STRICTLY PERMISSION POLICY BOUND (only active as per user permission), until permitted sha

For combining/merging/implementing/incorporating the below given tools/repos - you may first need to reverse engineer

1) i want to first understand what each of the the following work and how? after that add/implement/merge/compile/u

you need to extract and merge/combine all the repo/tools codes into one logically and systematically categorized/gro

you can create a hub in the backend where all the cleanly categorized and grouped tools/repos related to backend c

interconnect them all.

a). AI models, inference & local AI

Tool / Project What it is Main use

vLLM High-performance LLM inference/serving engine Run LLMs efficiently, especially GPU servers; OpenAI-compa

Ollama Local LLM runtime Download/run models locally and expose an API

NVIDIA Personal AI Router (PAIR) Local-network inference router Route AI requests between multiple PCs running

TensorRT / Torch-TensorRT NVIDIA inference optimization Optimize PyTorch/LLM models for NVIDIA GPUs

Wan 2.2 Generative video model family Text/image-to-video generation and video generation workflows

DeepSeek Reasonix Reasoning-model/project reference Experimentation around reasoning LLMs; exact repo should

Ornith 1.5 AI/model name Exact project/model URL needed

Kimi K3 Large language model reference General reasoning/coding/long-context AI; exact repository/model page sh

MiniMind Small educational LLM project Learn how a miniature LLM is trained/built

MoE Mixture-of-Experts architecture Build models where only selected expert networks activate per token

SLM Small Language Model category Run capable language models with lower hardware requirements

SAM Usually Segment Anything Model Image segmentation/object masking

LCM Latent Consistency Models Fast image generation with fewer diffusion steps

Sana / NVLabs Sana NVIDIA generative image model Efficient high-resolution text-to-image generation

Foocus Stable Diffusion UI Easy image generation without complicated node graphs

Whisper Speech-recognition model Audio ? text transcription

OmniVoice Speech/voice AI project Voice generation/voice interaction; exact repo should be checked

HeyGem AI avatar/video project Create talking-head/AI-avatar videos

ComfyUI Node-based generative AI UI Build advanced image/video/audio generation pipelines

Open WebUI Local AI web interface Chat with Ollama and other OpenAI-compatible models

FreeLLMAPI Free/low-cost LLM API resource Find API access to language models; verify provider terms before pro

Free LLM API Resources Curated resource list Find free/cheap model APIs

WhichLLM LLM comparison/resource Compare available LLMs/providers
